

# RESEARCH IN LAND RECORDS

By Judy Janes

April 25, 2018

Land records are often overlooked by genealogists. It is estimated that 90 percent of white males owned land before 1850 making one of the most important genealogical sources for genealogists. Land records in America date back to the early 1600's, and barring records destruction, every name is indexed in a grantor or grantee deed index.

Land records often state kinship connections. They also place individuals in a specific place and time. Land records offer researchers the ability to sort people and families into neighborhoods and closely related groups which may reveal more family ties.

The Family History Library has microfilmed land records throughout the U. S., and some of those are now available online at FamilySearch.org.

William Dollarhide wrote an excellent article in 1995 about the importance of land records in genealogical research titled: *Retracing the Trails of Your Ancestors Using Deed Records*. Although dated, his discussion is as valid today as it was then.

## MILITARY BOUNTY LAND

The Federal Government awarded Military Bounty Land to its veterans from 1788 primarily to 1855. Some applications were received as late as 1960.

## STATE-LAND STATES & PUBLIC DOMAIN STATES

The U. S. uses two different survey methods. State-Land states use Metes and Bounds, and Public Domain States use Township and Range.

- Understanding Metes and Bounds System:  
[https://en.wikipedia.org/wiki/Metes\\_and\\_bounds](https://en.wikipedia.org/wiki/Metes_and_bounds)
- Platting Metes and Bounds Land – Deed Platter  
<http://www.genealogytools.net/deeds>
- Plat Plotter  
<http://platplotter.appspot.com/>
- DeedMapper by Direct Line Software – One must purchase this high-powered software program. Software purchasers have access to their Deed Data Pool submitted by users which is particularly strong for the State of Virginia. Indexes are viewable to anyone.  
<http://www.directlinesoftware.com/home>

The Federal Government began conveying public land to individuals in 1820, and continues to the present day. There are 30 Public Land states. The Bureau of Land Management has published land patents online, and in some cases, the original surveys as early as 1810 can also be found. New records are added as time goes on.

- Bureau of Land Management, General Land Office: [www.glorerecords.blm.gov/default.aspx](http://www.glorerecords.blm.gov/default.aspx)
- Article about the Public Land System by the U. S. Geological Survey: [http://nationalmap.gov/small\\_scale/a\\_plss.html](http://nationalmap.gov/small_scale/a_plss.html)

The Family History Library has microfilmed a large portion of original deed records in the U. S. Some of these microfilms are available online at FamilySearch.org, and others can be borrowed from Salt Lake. To begin land research check the Grantee and Grantor Deed Indexes in counties where your family lived. The two deed index worksheets below will help you record information you find.

- Grantee Deed Index Form: <http://www.familytreemagazine.com/upload/images/pdf/grantees.pdf>
- Grantor Deed Index Form: <http://www.familytreemagazine.com/upload/images/pdf/grantors.pdf>

## County Boundary Changes

County boundaries changed often. A family may have lived on the same farm their entire married life, but in several different counties, or even states. It is vitally important to know where to look for records, and you will find this animated *Atlas of Historical County Boundaries* on the Newberry Library's website to be a valuable tool. <http://publications.newberry.org/ahcbp/>

AniMap – A more feature rich animated county boundary atlas. The software program also offers 2,300 maps to help locate towns that have long disappeared. The earliest map dates to 1617 in Virginia. The "Sitefinder" or town, lists more than 1 million places in the U. S.

## Legal Terms Used in Deed Records

- Los Angeles Public Library: Black and white maps available to library cardholders only: <http://sanborn.umi.com.ezproxy.lapl.org/splash.html>

## Transcription Software Programs

Transcript 2.5.0: A program developed by Jacob Boerema of Holland. The free version has handy tools that allow easy transcription of any written document. There are Free and Pro versions available. Windows or MacBook Air running Crossover.

Free version: <http://www.jacobboerema.nl/en/Freeware.htm>

Genscriber: Documents can be transcribed in a word processor style, or in a spreadsheet type grid where facts can be easily be recorded. Available for Windows or Mac computers. Free!

<http://www.genscriber.com/genapps>

Read a review of Genscriber by Dick Eastman:
